

To Whom It May Concern,

I recently learned of the new Avera Breast Center Mobile Digital Mammography program. I am very interested in having this specialty unit come to our work site and I wanted to share this information with you. I believe the ability to detect early breast cancer with this state-of-the-art technology would greatly benefit the health of our employees.

Statistics show one in eight women will develop breast cancer in her lifetime. Breast cancer is very survivable, if detected in its early stages. Routine screening mammography is the key for survival and early detection minimizes needed treatment.

The mobile unit increases access to digital mammography and would be so convenient. The service is no cost to the work place, each appointment only takes 15 minutes (perfect for break time) and charges are filed to insurance for each participating individual.

I hope you will consider this service to keep our workforce healthy! For more information, please contact Jasele Brue at (605) 322-3818 or jasele.brue@avera.org or Jill Schultz at (605) 322-3808 or jill.schultz@avera.org. Thank you.

Sincerely,
