

WHY IMMUNIZE?

Protect your family: Vaccines give you the power to protect yourself and your family from getting sick.

They protect against serious illnesses such as measles, mumps, tetanus, chicken pox, meningitis and more.

Protect our society: Diseases like polio, diphtheria and rubella are becoming rare due to vaccinations. Until we eliminate disease, it's important to keep immunizing.

Vaccinations are safe: The CDC and FDA take many steps to make sure vaccines are very safe. The CDC also reports that there is absolutely no link between vaccines and autism.

Schedule immunizations today.

Pneumococcal 13 (pneumonia)**

Pneumococcal 23 (pneumonia)**

The list above indicates the earliest age the dose of the vaccination may be given, although some may be given at different ages - check with your provider.

*This vaccination is only necessary if you didn't receive it as a child.

**May be given earlier to special populations, such as those with heart disease, lung disease, sickle cell disease, diabetes, alcoholism, cirrhosis, a disease or condition that lowers the body's resistance to infection, and those who smoke.
